**SUNGLASSES FOR KIDS**

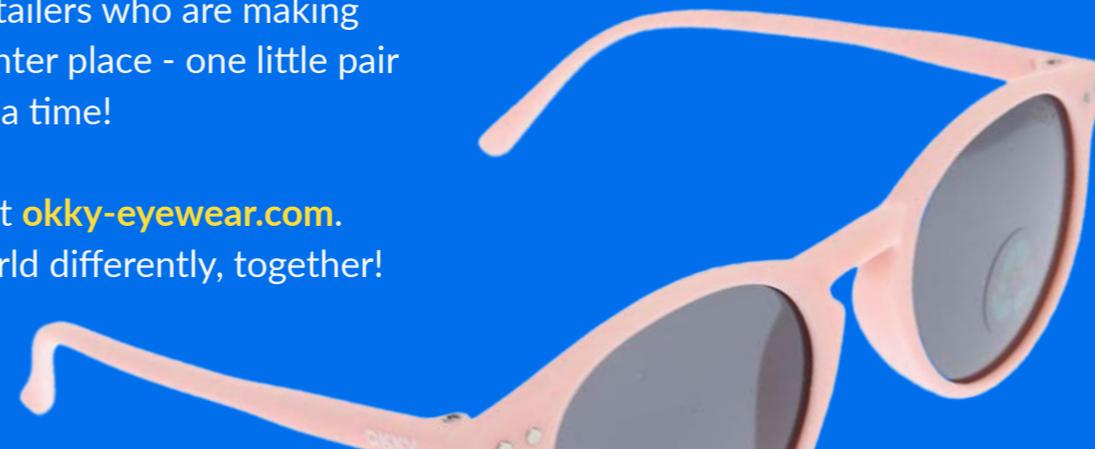

**LOOK  
COOL  
FEEL  
COOL**

At Okky Eyewear, we make sunglasses that kids love to wear - and the planet loves too! Our frames are crafted from recycled plastic in partnership with Waste Free Oceans (WFO). So, while little adventurers are busy playing, they're also helping to clean up oceans, rivers, and beaches.

With shapes and colors as playful as the kids who wear them, Okky's sunglasses are perfect for babies (0-1.5 years), toddlers (1.5-3 years), kids (3-9 years), and teens (9-16 years). They're fun, fashionable, and ready for any sunny-day adventure!

Looking to bring some feel-good fun to your store? Join our community of opticians and retailers who are making the world a brighter place - one little pair of sunglasses at a time!

Let's see the world differently, together!

# SUNGLASSES MADE FROM WASTE

We create our eyewear from recycled plastic waste sourced from the sea, in collaboration with Waste Free Oceans (WFO). So with every purchase - together with our little adventurers - we make our planet's waters a little cleaner, step by step! That's how we like to see the world.

# BOXES FIT FOR ALL KIDS

Okky glasses are available per piece for all ages. We also offer two masterboxes, tailored for two age groups. For kids aged 3-9, we offer a box with 30 fun and colorful pairs. For toddlers aged 1.5-3, there's a box with 30 playful glasses with a strap. All lenses are polarized and have 100% UV protection in Cat. 3. Full of bold, colorful frames to make every day brighter and full of fun!

# PLANET PROOF EYEWEAR

After plastic was invented in the late 19th century, mass production of plastic began around 1950: the so-called plastic era.

Plastic is easy to produce and can no longer be ignored in our daily lives. But this synthetic material practically does not decay, and that is a life-size problem. It not only pollutes our nature, but also threatens our flora and fauna. Every year, 4.7 million tons of non-biodegradable waste ends up in the oceans, and 1 million birds and 100.000 mammals die from eating plastic debris.

The production of plastic releases carbon dioxide, this leads to global warming and is bad for health. Everyone knows that plastic pollution must stop. Recycling is a good solution, but at the moment, half of all plastic produced is intended for single use.

Products made from recycled materials are more expensive than products made from new soils. This is due to the production chain which is not yet being set up properly for recycling

With Okky we want to actively contribute to the development of sustainable production in the eyewear industry. We have a large network in the world of eyewear and we will not stop until we have really made a difference.
